

Perturbation evidence is multiplying faster than it can be organised

A single pooled genome-scale Perturb-Seq dataset can **simultaneously profile tens of millions of cells across hundreds of thousands of perturbations**. That scale could reveal robust biology across studies, but identifiers, metadata, assays and processing pipelines differ. The Perturbation Catalogue aims to unify datasets across modalities and provide a shared access path for this evidence.

36× growth in perturbation papers over two decades

Perturbation Catalogue is a curated database that brings together data from various genetic perturbation experiments, including Perturb-Seq, CRISPR and MAVE screens, making it easier for researchers to study how modifying genes or proteins affects biological function across various biological and molecular contexts.

Perturbation Catalogue at a glance

Explore high-level statistics across the catalogue before diving into specific targets.

/dataset/nadig_2025_jurkat

Dataset: Nadig 2025 Jurkat

Study Title: Transcriptional analysis of differential expression in perturbation states

Study Author: Agnieszka

Last Author: Lili J. O'Connor

Study Year: 2023

Experiment Title: Jurkat day 7 essential genes set Perturb-seq experiment

Experiment Summary: Jurkat cells were transfected with a global library targeting a set of 2,015 common essential genes and analysed by day 7 after perturbation induction. Subsequent GSEA library containing two distinct probes targeting the same gene were used.

Data Modality: Single-cell

Perturbation Type: CRISPR

Data is available in **Parquet** and **CSV.gz**, and metadata as **JSON**.

Stay tuned for more exciting things coming soon

Extract structured metadata faster

AI-assisted drafting with curator review and validated ontology mapping.

Reanalyse more designs

More kits, experimental structures and independent quality metrics.

Publish regular, versioned releases

Explicit provenance and stable snapshots for reproducible downstream use.

Reanalyse MAVE data

Enrich variant-to-function coverage with harmonised scores.
